Subject: Project team coding structure of additional technologies

Dear project team member,

Welcome to this project team, the name and objective of this team are in the title. The constitution of the team looks quite well balanced but if no one has any objections I would like to add to the mailing list Helmut Ruppert of Agrident, Neil Hammerschmidt of USDA, Reiner Wagner of AEG (at the request of Christian Schenk) and Tony Britt who I believe is now retired but who's input may be valuable. If anyone has current contact details please share.

I enclose two documents as a starting point for discussion, one is the USDA proposal for an interim code structure to be used in UHF tags in North America pending the development of an International Standard. The other is a scheme proposed by ScotEID to allow Scottish cattle to carry official passport details on a UHF tag. Both of these proposals address localised requirements and demonstrate the diversity of schemes in the absence of an IS.

I would invite you all to share by return details of any other proposed scheme national or other you are aware of. This information should fuel our first telco which I propose we schedule for the very near future, allowing for the dissemination of any forthcoming information.

Best regards,

Mark Tereszczak
