# Heat stress tolerance indicators to be used as phenotypes in GWAS analyses: a comparison study in dairy cattle.

*M. Ramón<sup>1</sup>, M.J. Carabaño<sup>2</sup> & C. Díaz<sup>2</sup>*

*<sup>1</sup> CERSYRA-IRIAF. Avda. del Vino 10, 13300, Valdepeñas, Ciudad Real, Spain*

*<sup>2</sup> Dpto. Mejora Genética Animal, INIA, Ctra. A Coruña Km. 7,5, Spain*

# Justification

- Characterization of individual heat-tolerance is a key factor for the genomic characterization of heat tolerance (GWAS)
- Most common approach: use of routine milk recording information merged with meteorological information (Misztal, 1999).
- Problem: antagonistic relationship between production level and heat tolerance → Challenge: Obtain measures of tolerance independent from milk production

**Goal(s): 1. Compare alternative ways of measuring heat tolerance  
(2. Compare the use of different methods of detection of genomic signals)**

# Material and Methods

# Data-Phenotypes

- Test day fat and protein yields from Southern Spain

- Daily temperature and humidity from nearest weather stations

	$\mu$	[1%-99%]	Cows	Records
Fat (kg/d)	1.07	[0.4-2.0]	128,003	2,466,055
Protein (kg/d)	0.99	[0.4-1.6]	127,977	2,475,092
Milk (kg/d)	30.7	[11 -52.1]	128,112	2,514,762
Fat (%)	3.56	[1.8-5.5]	128,003	2,466,055
Protein (%)	3.27	[2.6-4 ]	127,977	2,475,092

Heat load	Percentiles					
	0%	50%	75%	90%	99%	100%
THIavg	19	59	68	72	76	81
THImax	32	66	74	78	82	89
Tavg (°C)	-5	15	22	26	30	36
Tmax (°C)	-1	21	29	34	40	46

# Data: Pseudo\_phenotypes (PF)

Random regression model (RRM) on heat load (Tave, THlave):

$$\mathbf{y} = \text{HTD} + \text{Lac-DIM} + \text{LP}_m(2) + \text{LP}_{\text{animal}}(2) + \mathbf{e}$$

$\mathbf{y}$  is the test day fat or protein yield;

HTD, Lac-DIM are environmental factors that affect yield

$\text{LP}_m(2)$  is a quadratic curve representing the average reaction to heat load

$\text{LP}_{\text{animal}}(2)$ : quadratic Legendre polynomial ( $b_0, b_1, b_2$ ) on animal effects (no relationships) representing individual response to heat load;  $\text{var}(\mathbf{b}) = \mathbf{B}$

# Data: Pseudo\_phenotypes (PF)

## Pseudo-phenotypes:

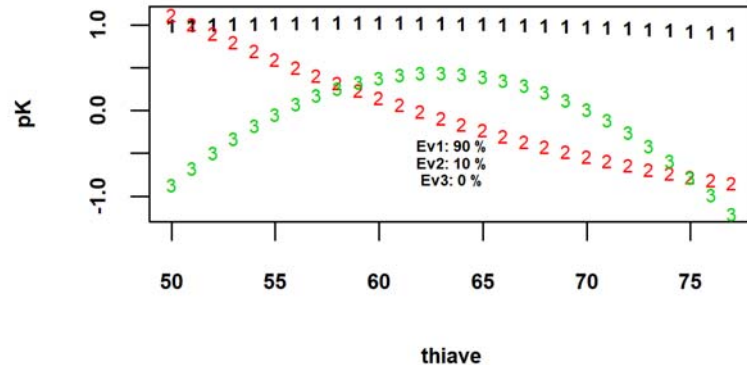

A) Production level: **bo**

B) Tolerance:

- **b1** (linear coefficient)

- **Slopes** of the individual response curve at  $T_{avg}=26$ ,  $THI=72$ ,

- **Eigenvariables** eigen2, eigen3 (from **B**, covariance matrix from the RRM for animal effects)

# Data: Genotypes

- 50k Illumina bovine bead chip genotypes of CONAFE data base
- Quality control (using Plink 1.9)
  - Only autosomes (Chr1 to Chr29),
  - call rate animal=0.90,
  - call rate genotypes=0.90
  - MAF : 0.00001\*

\* to suppress fixed markers. For others, SNP frequencies and HWE were checked after GWAS analysis

# Methods: GWAS

## 1. Based on Pseudophenotypes (PF\_GAbel)

$$p = \text{marker} + g + e$$

p: pseudo-phenotype for production level and tolerance for genotyped bulls with > 6 daughters with phenotypes (**1380 Bulls**)

marker: SNP effect on p (one at a time)

g: polygenic effect on p (covariances=genomic relationship)

e: residual term

Solved with **GenABEL** package (R Project)

**Relevant SNPs if FDR < 10%**

## 2. Single-step GWAS (ssGWAS)

$$p = \mu + g + e$$

p: pseudo-phenotype for production level and tolerance for cows (**127,000 cows**)

g: polygenic effect on p (covariances = pedigree and genomic relationship)

e: residual term

SNP effects and their associated variance is obtained from solutions for **g** and genotypes information.

Solved with **BLUPF90** family programs (Misztal et al, 2002)

**Relevant SNPs if  $\text{var}(\text{window}20) > 0.5\%$**

# Results

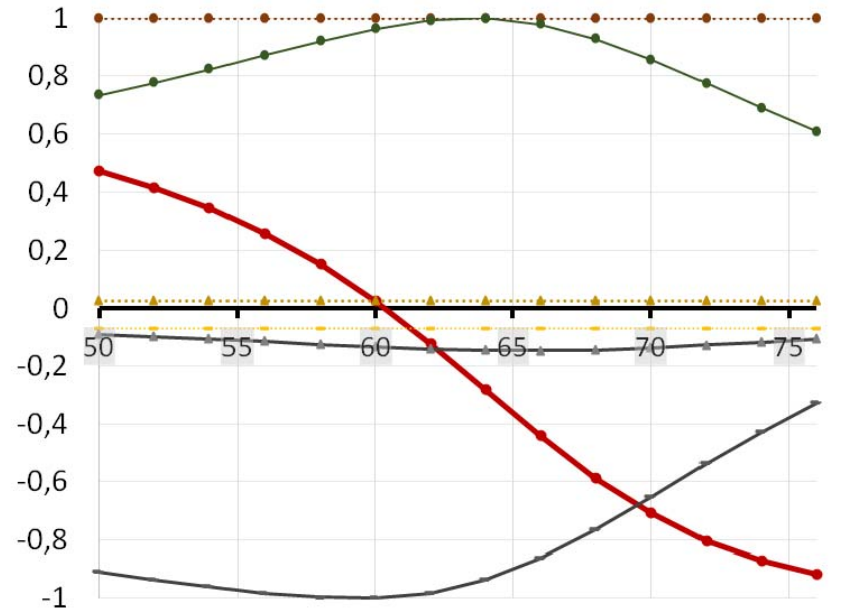

# Pseudo-phenotypes ( $\rho$ ) correlations

Holstein Fat\_THIavg

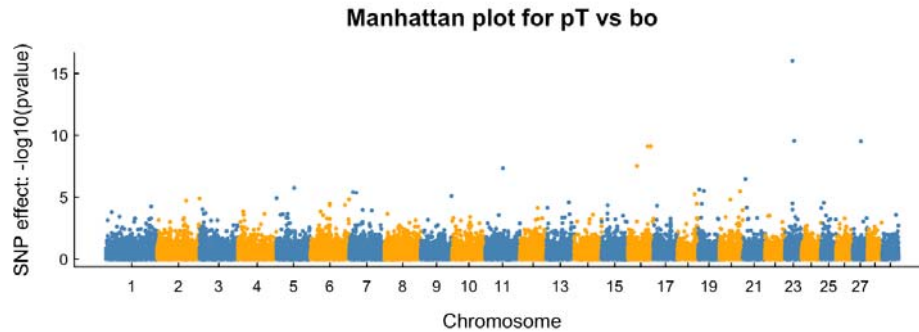

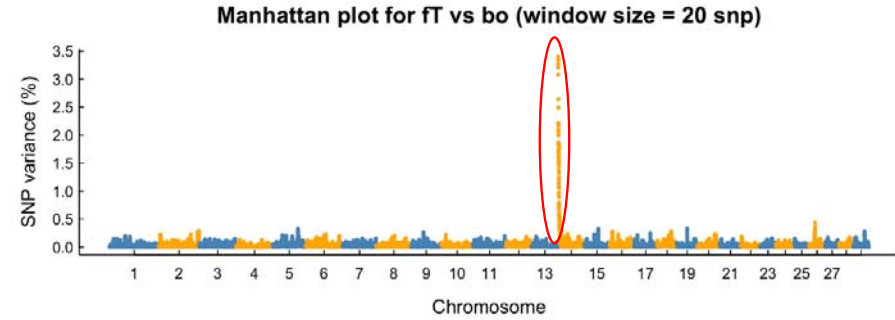

Holstein Protein\_THIavg

# Manhattan plots – Production level (bo)

## PF\_Gabel vs.ssGWAS

# SNP discovery: Level vs. Slopes of decay

Manhattan plot for fT vs bo

Manhattan plot for fT vs slg\_26

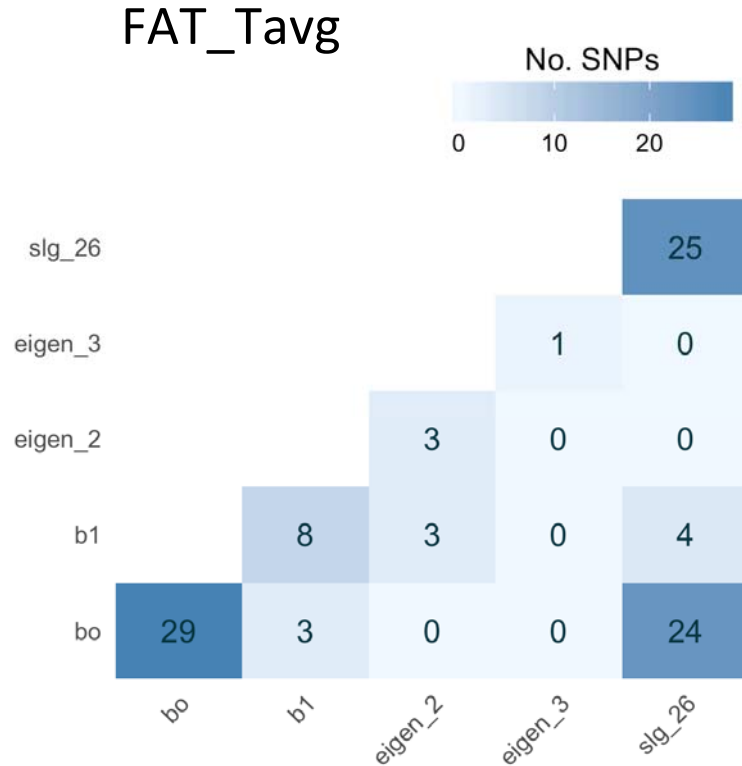

Manhattan plot for pT vs bo

Manhattan plot for pTHI vs slg\_72

# SNP Discovery Production vs. Tolerance - PF\_GAbel

Many relevant SNPs are shared by level of production and slope under heat stress, but none with eigens

Number of 'relevant' SNP signals for production level and heat tolerance for fat and protein using PF\_Gabel (p-values) or ssGWAS (%variance) and number of common signals between methods

## FAT vs. PROTEIN

		Level*	Heat Tolerance*
Fat	PF_GAbel	30	32
	ssGWAS	95	151
	common	21	16
Protein	PF_GAbel	34	33
	ssGWAS	17	68
	common	0	0

\* Level=bo, Heat Tolerance= (b1, slp\_26, slp\_72, eigen\_2, eigen\_3)

ssGWAS: Much larger number of signals for fat (Chr14-DGAT)

Number of 'relevant' SNP signals for production level and heat tolerance for fat and protein using PF\_Gabel (p-values) or ssGWAS (%variance) and number of common signals between methods

## PF\_Gabel vs. ssGWAS

		Level*	Heat Tolerance*
Fat	PF_GAbel	30	32
	ssGWAS	95	151
	<b>common</b>	<b>21</b>	<b>16</b>
Protein	PF_GAbel	34	33
	ssGWAS	17	68
	<b>common</b>	<b>0</b>	<b>0</b>

\* Level=bo, Heat Tolerance= (b1, slp\_26, slp\_72, eigen\_2, eigen\_3)

No common SNPs except for large signals (fat-Chr14\_DGAT)

Number of 'relevant' SNP signals for production level and heat tolerance criteria for fat and protein using PF\_Gabel (p-values) or ssGWAS (%variance)

		Heat Tolerance			
		Level	Linear	Slp_heat	Eigen
Fat	PF_Gabel	30	8	25	6
	ssGWAS	95	58	98	40
Protein	ssGWAS	34	5	30	3
	PF_GAbel	17	25	23	33

\* Level=bo, Linear= b1, Slp\_heat=slp\_26, slp\_72, Eigen= eigen\_2, eigen\_3)

**188 genes in +/- 1Mb window**

# MOLECULAR FUNCTIONS OF POSITIONAL CANDIDATES GENES detected by the EIGEN VALUES as pseudo-phenotypes

# CONCLUSIONS

- Production level is a large component of heat tolerance in highly selected dairy cattle
- Eigenvariables gathering variability in fat and protein yields associated to changes in heat load explained a small proportion of the variability observed (10%), but, could still be used to detect genomic signals and candidate genes that influence response in milk quality to heat load without a relevant effect on production level.
- ssGWAS and PF\_GenAbel picked rather different relevant SNP except for strong signals

# Thanks for your attention
