How to get reliable data about the claw health on cattle

• What is the question?
  • How do we avoid decrease in milk production because of not perfect claw health?

• The answer is

  Result:

  We get registrations from more than 50% of the claw trimmers

  On more than 60% of the animals

• To optimize claw health by
  • Breeding for
  • Focus on

• To achieve that we need data on Claw health

• And the most obvious will be to ask the ones close to the claws – the Claw Trimmer

• So we (the Nordic countries) created a tool for input of registrations that are transferred to the respective national databases
Update needed

Why:
• Only Windows application
• Technical depth has grown big

How
• We developed a new tool that:
  • Can be used on every platform and device
  • Tested in real environment
  • Still works offline

Result:
Smarter user interface for all platforms
In production all 4 countries during 2019
Hopefully even more (and better) data
Thank you 😊
