IRIS-ASP: the solution for cattle recording

Petra Galesloot
June 7, 2006

Topics
- What is IRIS-ASP?
- Application Service Provision (ASP)
- Where is IRIS used?
- Example: traject in China

What is IRIS-ASP?
- IRIS cattle information system through Internet
- A full service provided by NRS
- Central system
- For cattle improvement organisations
- In any language

IRIS modules
- International cattle information system

Concept of IRIS
- Profitable output for organisations and cattle farmers
- Base for reliable data
- Easy im- and export
- Customised to organisation
- System sharing
- Collective development

Application Service Provision (ASP)
- NRS takes care of hardware, software and backup procedures
- Access at any time, any where
- Local printing of reports
- Particularly interesting for small organisations
IRIS-ASP started in Luxemburg

Over Internet CITRIX application

Where is IRIS used?

Key benefits of IRIS-ASP

- Low investments up-front
- Fast and easy implementation
- Access to an advanced system/expertise
- Bigger focus on core-business
- Guaranteed performance
- Continuous on-going system development and maintenance

Project in China

- Aim: to set up a milk recording service by means of IRIS-ASP
  - Installation of lab
  - Implementation of IRIS-ASP
  - Development of milk recording method and logistics
  - Advice to dairy farmers
- Partner: Henan Huahuaniu Group
- Two-year project

Current status

- Laboratory set up for fat%, protein% and SCC
- IRIS-ASP operational
- Screens, database and reports in Chinese
- Milk recording introduced at first farms
Farm of Huahuaniu

Something new: IRIS-ASP in Chinese

Next step: milk collection centers

Milk collection center

Milking at MCC
Calibration milk glasses

Milk recording

Extension

Thank you very much!
