## Overview

- US Beef Industry
  - Inventories
  - Production
  - Structure
- Trends
  - Genetic
  - Performance Recording
  - Breed Registrations
  - New trait development
  - New Technologies

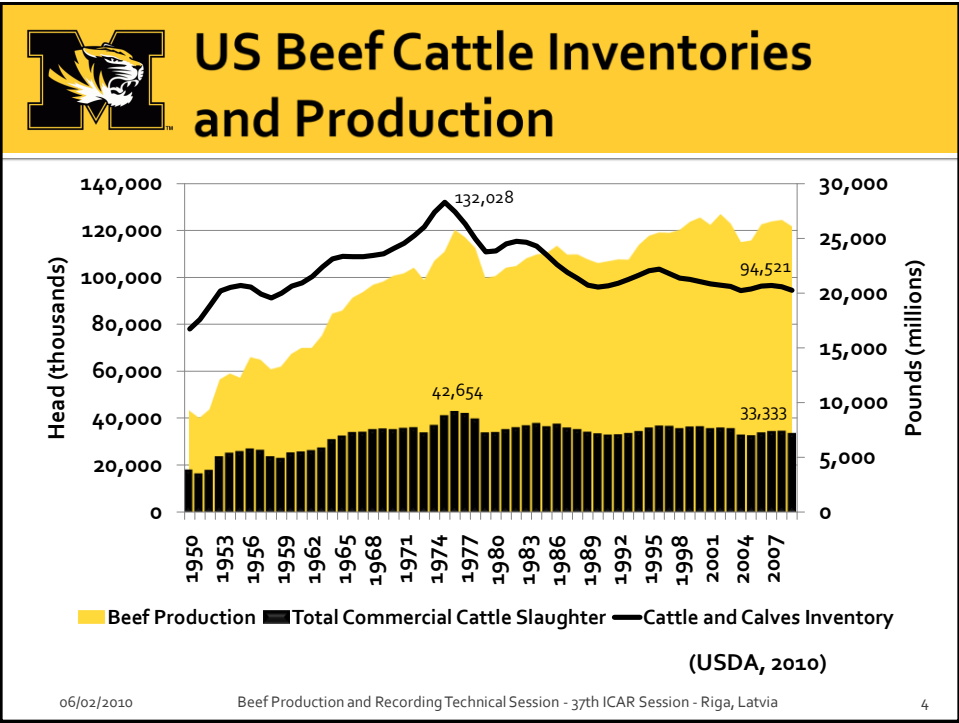

# US Beef Industry Overview

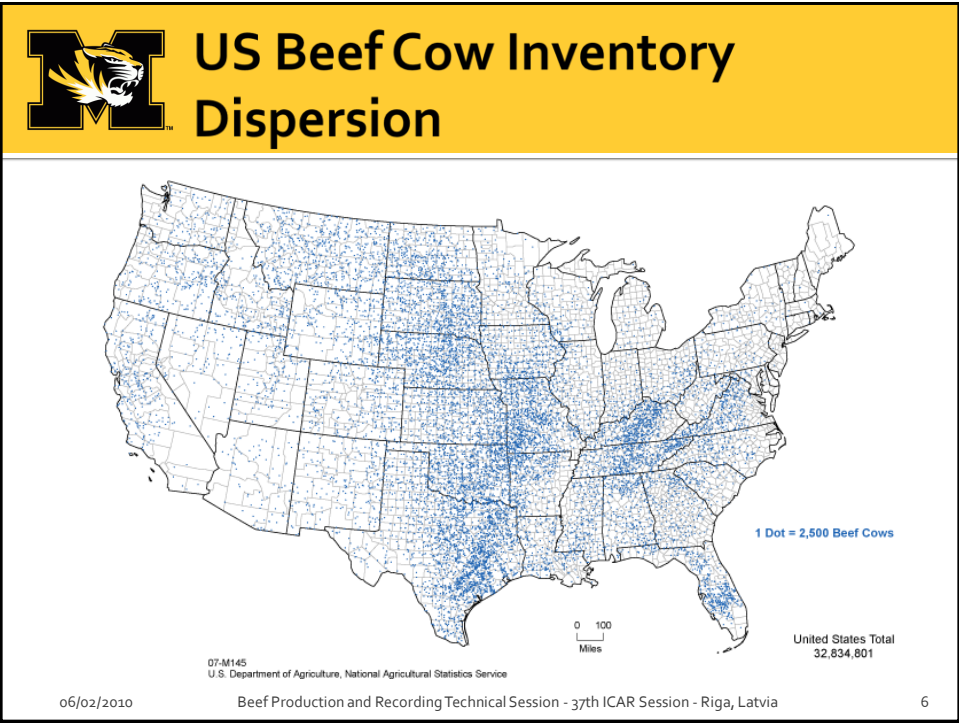

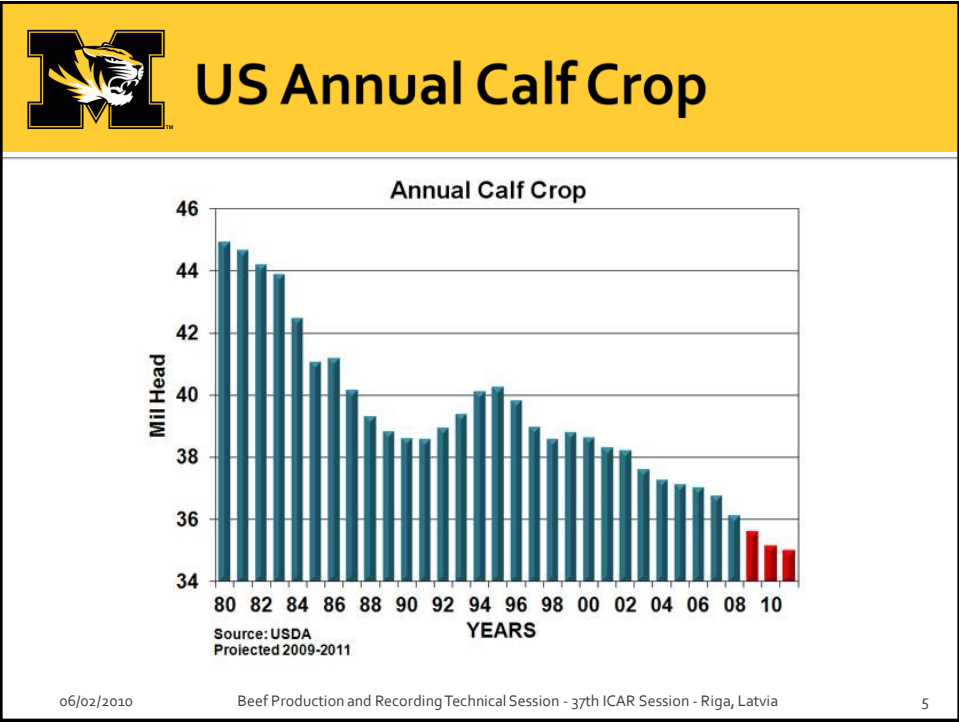

- US beef production is a big business
  - Largest segment in Ag sector of US economy
  - \$61 billion in 2007 (USDA, 2007)
  - 32.8 million beef cows (USDA, 2007)
  - 765,000 beef farms/ranches (USDA, 2009a)

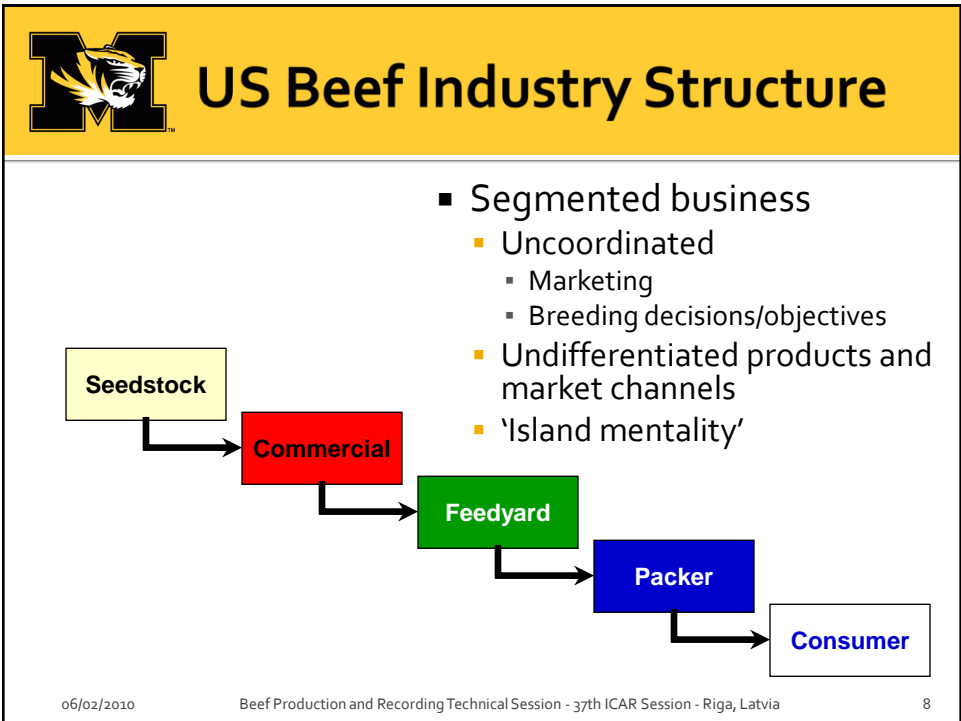

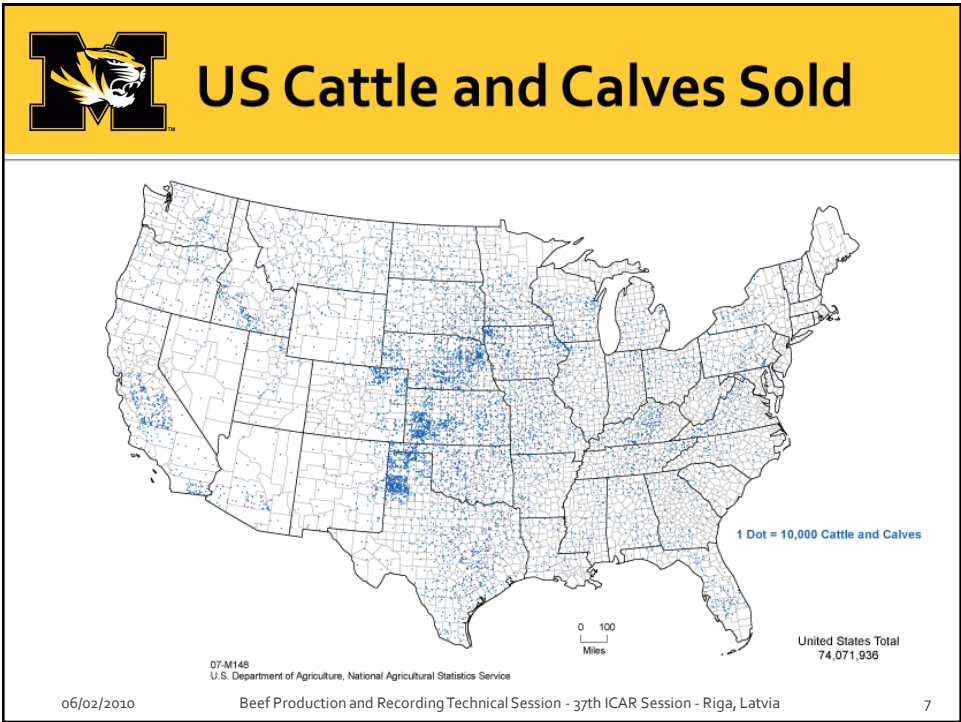

06/02/2010

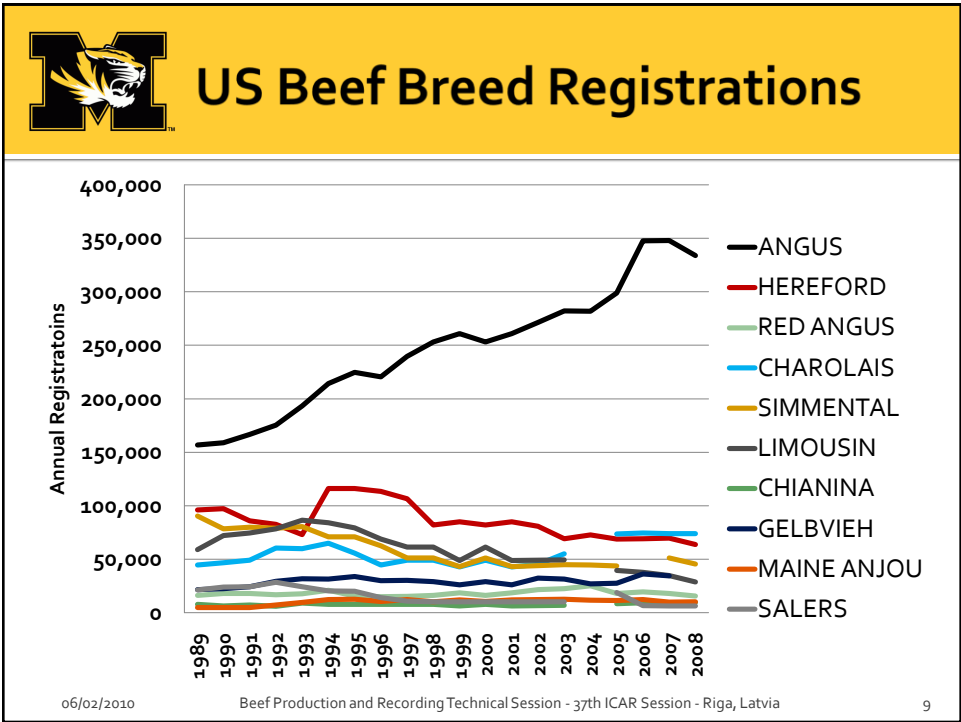

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

19

## Evolution of Performance Record Systems

- Traditional – registration and performance systems separate (\$ for each) – Pay as you go
- Cow or herd based systems
  - One fee for performance record processing, registration and transfer
  - Cow based system, per cow charge on entire inventory (AR, SM, GV)
  - Hybrid systems (decoupling of registration and performance record charges)
- Objectives – more performance record density and fertility/longevity data

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

23

## Phenotype and Evaluation Development

- Calving Ease (Direct and Maternal)
  - DONE!
- Growth (BW, WW, YW, CW)
  - DONE!
- Carcass (Marbling, Yield, Fat Thickness, REA)
  - DONE!

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

24

## Phenotype and Evaluation Development

- Maternal/Reproduction
  - Heifer Pregnancy
  - Stayability/LPL
    - SP(5)<sub>1</sub>
    - S(5)<sub>1,2,3,4</sub>
- Temperament/Docility
  - Chute Scores
- Feed Intake/Efficiency
  - FCR, FE, RFI, FI

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

25

## Why is multiple trait selection..

- Difficult?
  - Lots of EPDs
  - Some for Economically Relevant Trait (ERT) some for Indicator Traits
- Important?
  - More than one trait is important for enterprise, operation or industry profitability

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

26

## The Role of Economically Relevant Traits

- A trait that has a direct cost or return associated with it is an Economically Relevant Trait (ERT).
- Traits that are correlated to ERTs are indicator traits.
- Example: Is Birth Weight or Calving Ease the ERT? Why??
- Weaning Weight or Yearling Weight?

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

27

## Relative Economic Weights for Integrated Beef Firm

Reproduction:Growth:End Product

**2:1:1**

(Melton, 1995)

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

28

## Angus Selection Indexes

- \$W = Weaning Value (\$ per head)
  - BW, WW, Milk, Mature Wt.
- \$F = Feedlot Value (\$ per head)
  - WW, YW and correlations
- \$QG = Quality Grade (\$ per head)
- \$YG = Yield Grade (\$ per head)
- \$G = Grid Value (\$ per head)
  - Grade and yield components
- \$B = Beef Value (\$ per head)
  - \$F and \$G adjusted for weight and costs
- \$EN = Cow Energy (savings/cow/year)
  - Milk and Mature Wt. as they relate to maintenance energy requirements

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

29

## New tools...rapidly changing

- New tools
  - Sequencing
  - SNP detection and characterization
  - High throughput genotyping platforms
    - 3K, 20K, 50K, 800K SNP per chips
- Bovine Genome Sequence
  - SNP identification
  - Additional SNP discovery to build BovineSNP50 chip

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

30

## DNA Marker Testing

- Increased utility
  - Markers will describe a larger portion of additive genetic merit
    - Inclusion of many more marked QTL
  - Panels will be generated for a larger number of ERT and qualitative traits
  - Enhance selection response and elimination of deleterious genes
  - Incorporation of genomic data into genetic evaluation systems
- Rapid proliferation over next 12-18 months

06/02/2010

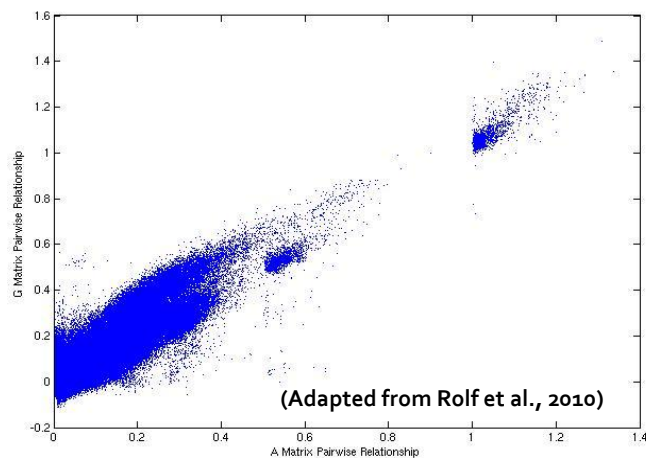

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

31

## Traditional vs. Genomic Relationships

- n=1,707 animals

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

32

# Convergence

- Large marker panels or whole genome selection system
- Incorporate marker data into EPD calculation
  - Am. Simmental used WBSF markers in computation of EPD
  - Am. Angus Association debut of Genome Assisted Carcass EPDs
- Improves accuracy for young animals/selection candidates
- Reduces need to collect expensive phenotypes
- Eliminates discrepancies in MBV and EPD

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

35

# MBV as additional correlated trait-MARB-IMF-MBV

|      | MARB  | IMF    | MBV   |
|------|-------|--------|-------|
| MARB | ~0.45 | ~ 0.60 | ??    |
| IMF  |       | ~0.35  | ??    |
| MBV  |       |        | ~ 1.0 |

Heritability on diagonal, genetic correlations off diagonal

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

36

## Beef Improvement Federation Commission on DNA Markers

“The BIF Commission believes that information from DNA test only has value in selection when incorporated with all other available forms of performance information for economically important traits in NCE, and when communicated in the form of an EPD with a corresponding BIF accuracy.”

--Tess 2008

06/02/2010

Beef Production and Recording Technical Session - 37th ICAR Session - Riga, Latvia

37

## Challenges/Opportunities

- Development of ERTs
  - Phenotypic record collection is difficult and expensive
- Expansion of herd/cow based recording systems to capture fertility/longevity data
- Expansion of participation in performance system by seed stock and commercial producers
- Implementation of genomic selection tools
  - ERT/defect focused
  - Adequately sized resource populations for training/QTL discovery
  - Evaluation and delivery platforms to handle genotype/MBV data
  - Cost vs. response to selection
