¹Cattle Breeders' Ass. of Turkey, Technical Department, ANKARA, Turkey

Studies on raw milk quality in Turkey which are acceptable at the ministerial level, has begun as officially in 2012 in light of the data that has been collecting since 1998. Project is co-executed by Cattle Breeders' Association of Turkey and Food, Agriculture and Livestock Ministry including Herdbook and Progeny Control Projects; to produce healthy milk, to support breeders with information about rational livestock feeding, nationwide udder health and care, future generation breeding and analysing cow' milk for the ingredients: fat, protein, somatic cell, lactose, dry matter. We aim to widen the area of the Project to include all over Turkey after five pilot cities; Balıkesir, Bursa, Tekirdağ, Ankara and İzmir. The Project includes pure breeds cattles which are breed in Herdbook farms.
