Cow - vial link - Vial number

There are 2 general rules:

- Vials have numbers on lids
- The order of vials in a box is set

farmers

Cow - vial link

- how to make it easy

There is one general rule:

- Cows' milking order/data recording order
= vial following number

Cow - vial link- electronic data recording

Cow - vial link: robots + EMM parlours

- Cows' milking order/data recording order = vial following number
- In the case of AR (robot) vials numbers are set by robot
- In the case of AZ (calibrated milking parlour) vials numbers are attributed to a cow ID by a technician using APP.

Cow - vial link – shortcomings:

- **The vial lid isn't attached to the vial body...**
- **The system demands staff's full concentration while data recording**
- **In the case of errors – lack of traceability**
- **A4/A8 – at the second milking – need to find the right vial number from the previous milking ...**
- **Problems in big herds where cows finish milking at the same time – need for more than one technician**
- **Any change in the system needs time + money**

Cow – vial link: plans

- Implementation of bar code on vial body

Or

- Vials with RFID chips

THANK YOU
